Technical Rider

THE FIRE-BREATHING MUSIC MACHINE

Tromleorkestret is a two-person live act built around a homebuilt, robotic music machine: mechanical instruments, amplified springs and synchronised flamethrowers, played and improvised over live. This rider covers the stage, power, sound and safety requirements for a standard show; talk to us ahead of time about anything unusual at your venue.

STAGE & POWER

FOOTPRINT	L130 × W120cm (W100cm with keyboard unmounted, remounted inside the venue) × H190cm. Weight ≈200kg.
SURFACE	Flat, solid ground — paving, decking or a hard floor. Not suitable for grass, gravel or sand without a track/plates.
ACCESS	Drivable path or crane to position. Rolls up/down gentle slopes; cannot be carried up or down stairs.
POWER	Fully self-contained on internal batteries — no venue power needed for a standard show. Multi-day festivals: trailer parking + 220V to recharge overnight.
CLEARANCE	≥1m clear space on all sides of the machine for performers and heat/flame clearance (see Fire Safety).

SOUND

PA	Own onboard PA covers small-to-mid spaces unamplified. Stereo DI line-out available if the venue system/FOH is preferred for larger spaces.
MONITORING	Self-monitoring via onboard speakers; no separate monitor wedges required.
MICS	None required from the venue — all sound is generated and reinforced by the machine itself.
SOUNDCHECK	Not needed — but if requested, a brief check can be done once the machine is positioned and powered.

PYROTECHNICS & FIRE SAFETY

OPTIONAL	Fire is an optional part of the show — we can perform a full set without it if your venue can't accommodate open flame.
EFFECT	Short, controlled flame bursts (flamethrower elements) synchronised to the music — not a pyrotechnic charge/explosive effect.
CLEARANCE	≥4m overhead clearance from flame outlets to any flammable material.
INDOOR USE	Possible with adequate ceiling height and ventilation — must be agreed in advance and may require the venue's fire marshal / local permit sign-off.
EXTINGUISHER	Venue to provide one CO_2 fire extinguisher within reach of the performance area.

LIGHTING

ONBOARD	The machine carries its own integrated lighting (flame glow, LEDs). No venue lighting rig is required for the show to work.
OPTIONAL	A simple wash/key light on the performers is welcome if the venue has one, but is not essential.

Schedule, Crew & Hospitality

LOAD-IN & SCHEDULE

LOAD-IN	≈45–60 minutes from vehicle to stage-ready, given clear drivable access.
SOUNDCHECK	15–20 minutes.
SHOW LENGTH	Flexible — typically 30–60 minutes; can be adapted to your slot.
LOAD-OUT	≈30–45 minutes.
TURNAROUND	For multiple sets/days, the machine needs ≈1 hour between shows to refuel and reset.

CREW

TOURING PARTY	2 (performers, self-sufficient on technical setup).
LOCAL CREW	None required for load-in/out under normal access conditions; 1 extra pair of hands appreciated if access is difficult (stairs, long carry, etc.).
PARKING	Parking for car + trailer for the duration of the show — preferably without needing to disconnect them — with clear space behind the trailer to unload.

HOSPITALITY

CATERING	Full catering incl. vegetarian option, and beverages with and without alcohol.
DRESSING ROOM	A private, lockable space to change and store cases, close to the stage.
LODGING	Free accommodation for overnight/multi-day bookings.
